# Changing paper type on Bizhub Copier

If the paper type on the copier has been changed, for example to thick, and a job is sent to the printer using plain paper, a message may appear asking to select the correct tray. This is because of the mismatch in the paper types.
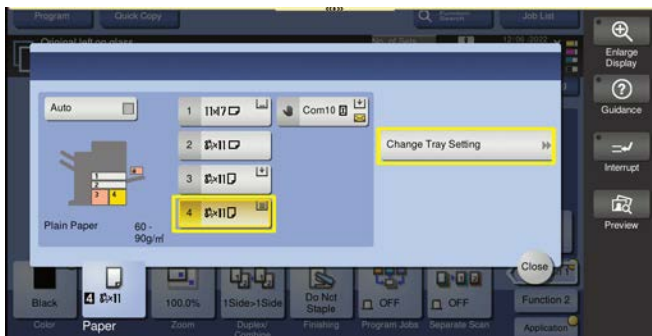

To change the paper type **back** to plain paper:

1. Enter the **COPY** screen on the copier (**[MENU]=>[COPY]**)

2. Touch **[PAPER]**

3. Select the tray with the paper requiring changing
4. Touch **[Change Tray Setting]**

5. Select **[Plain Paper]**

6. Select **[Auto Detect]**

7. Touch **[CLOSE]**

8. Re-send the print job

If the error persists, check the paper settings in the print driver prior to sending.
